DIRECT INVESTMENT INDUSTRY AND FOREIGN TRADE CLASSIFICATIONS BOOKLET

CONTENTS

Part I
Industry classifications 2

Part II
Foreign trade classifications 21

INTRODUCTION

This booklet provides detailed descriptions of each of the industry and foreign trade classification categories to be used in completing BEA's surveys of direct investment. Industry classifications described in the first part of this booklet (page 2), are used to determine the type of business conducted by the entity being reported. Do **not** *use industry classifications to classify foreign trade. Foreign trade classifications, described in the second part of this booklet (page 21), are used to classify, by product, U.S. merchandise exports and imports.*

BE-799 (Revised 2/83)

PART I.—DIRECT INVESTMENT INDUSTRY CLASSIFICATIONS

The titles of some direct investment (DI) industry classifications, by themselves, may be insufficient to classify certain activities. Consult the more detailed descriptions provided below to be sure of the correct classification. To assist in classification, a "NOTE" may be given after the definition of some DI codes. Such notes list the DI code for closely related activities which are NOT included in the classification being defined, but are included in some other classification.

The industry classifications defined below are to be used when completing the industry classification items in the Bureau's surveys of direct investment. These classifications, and their respective code numbers, were adapted from the ENTERPRISE STANDARD INDUSTRIAL CLASSIFICATION MANUAL, 1974, which sets forth an all-inclusive industry classification system for companies. That system, in turn, is related to the STANDARD INDUSTRIAL CLASSIFICATION MANUAL, 1972 (hereinafter referred to as "1972 SIC"), which sets forth an all-inclusive industry classification system for the individual establishments of an enterprise.

For the convenience of those U.S. reporters familiar with the 1972 SIC, the 1972 SIC code or codes which correspond to a given DI classification are shown in parentheses under the heading of each DI classification. There is not always a one-to-one relationship between the two industry classification systems. There may be slight differences between a given DI classification and the corresponding 1972 SIC classification, or a DI classification may be a combination of several 1972 SIC classifications. Therefore, when completing the industry classification items in the surveys, be sure to consult the definitions of the DI industry classifications given below.

There are two combinations of activities which need clarification—

1. Extraction and refining of petroleum by the same entity should always be classified in DI code 291 ("Integrated petroleum refining and extraction"); these activities should NOT be split between DI code 133 ("Crude petroleum extraction (no refining) and natural gas") and DI code 292 ("Petroleum refining without extraction"), when performed by the same entity.

2. Wholesale marketing of its own products by an entity primarily engaged in production does not constitute "Wholesale trade." For example, if an entity manufactures turbines and sells them to industrial users, its sales should be classified in DI code 351 (manufacturing of "Engines and turbines") and not in DI code 508 (wholesaling of "Other machinery, equipment, and supplies"). If, on the other hand, an entity sells turbines produced by others, its sales should be classified in DI code 508. To the extent that an entity manufactures and sells its own turbines AND sells turbines produced by others, its sales should be split between DI code 351 and DI code 508.

PART II.—FOREIGN TRADE CLASSIFICATIONS

The foreign trade classifications are to be used in classifying U.S. merchandise exports and imports. The classifications are PRODUCT classifications adapted from the Standard International Trade Classification, Revision 2 (United Nations Statistical Papers, Series M, No. 34/Rev. 2), hereinafter referred to as "the SITC." For each product category described below, the equivalent one-, two-, or three-digit SITC code, or combination thereof, is given for the convenience of those U.S. Reporters who are familiar with the SITC.

It should be noted that the FOREIGN TRADE classifications are product classifications used only in classifying merchandise trade flows; they should be carefully distinguished from the DI INDUSTRY classifications contained in Part I of this booklet, which are used in determining the major industrial activity of the entity being reported.
